Wednesday, November 17, 2004

**Consumer Price Index for Energy and Food  
Cleveland-Akron, OH CMSA  
October 2004**

Energy costs in the Cleveland-Akron area were down 0.1 percent in October, according to the U.S. Department of Labor's Bureau of Labor Statistics. Over the past 12 months, energy costs gained 13.2 percent and were up 35.5 percent from their most recent October low in 2001. The cost of grocery food (food at home) declined 2.3 percent from September to October. Grocery food costs rose 2.3 percent over the past year, following a 0.4 percent gain during the previous 12-month period ended in October 2003.

Nearly all of the latest monthly decline in energy costs for the Cleveland area was attributed to a 16.2 percent slide in electricity costs. In spite of the latest drop, over the past year electricity costs rose 1.9 percent, after posting a 3.0 percent decline in the previous 12-month period ending in October. Gasoline prices jumped 9.6 percent in the Cleveland area in October, almost offsetting the drop in electricity costs. Over the year gasoline prices were 29.4 percent higher and 64.4 percent above the most recent October low in 2001. Utility natural gas costs were unchanged for the month and were 2.5 percent higher for the year.

Scheduled release date for the November 2004 CPI:  
Friday, December 17, 2004

### CPI HOTLINE PROVIDES LATEST INDEXES 24 HOURS A DAY

The all items CPI-U and CPI-W for the U.S. City Average and for the Cleveland area are available to the public 24 hours a day, 7 days a week through the Bureau's CPI Hotline service. This recorded message also provides percent changes from the prior period and from a year earlier, as well as the scheduled release date for the next CPI issuance. The Hotline number in Cleveland is (216) 522-3852.

### BLS FAX-ON-DEMAND SERVICE OFFERS CPI DATA 24 HOURS A DAY

If you have a fax machine and a touch-tone telephone, you can order current and historical CPI data and receive it within minutes by fax. The BLS Fax-on-Demand service offers over 300 documents containing the most popular BLS data including more than 65 documents containing CPI data for the nation, four regions, and 27 metropolitan areas. To receive a catalog of available documents by fax, call (312) 353-1880, select menu option 1, and order document 1000 when prompted.

### BRIEF EXPLANATION OF THE CPI

The Consumer Price Index (CPI) is a measure of the average change in prices over time in a fixed market basket of goods and services. The Bureau of Labor Statistics publishes CPIs for two population groups: (1) a CPI for All Urban Consumers (CPI-U) which covers approximately 87 percent of the total population and (2) a CPI for Urban Wage Earners and Clerical Workers (CPI-W) which covers 32 percent of the total population. The CPI-U includes, in addition to wage earners and clerical workers, groups such as professional, managerial, and technical workers, the self-employed, short-term workers, the unemployed, and retirees and others not in the labor force.

The CPI is based on prices of food, clothing, shelter, and fuels, transportation fares, charges for doctors' and dentists' services, drugs, and the other goods and services that people buy for day-to-day living. Prices are collected in 87 urban areas across the country from about 50,000 housing units and approximately 23,000 retail establishments--department stores, supermarkets, hospitals, filling stations, and other types of stores and service establishments. All taxes directly associated with the purchase and use of items are included in the index. Prices of food, fuels, and a few other items are obtained every month in all 87 locations. Prices of most other commodities and services are collected every month in the three largest geographic areas and every other month in other areas. Prices of most goods and services are obtained by personal visits of the Bureau's trained representatives.

In calculating the index, price changes for the various items in each location are averaged together with weights that represent their importance in the spending of the appropriate population group. Local data are then combined to obtain a U.S. city average. Separate indexes are also published by size of city, by region of the country, for cross-classifications of regions and population-size classes, and for 27 local areas. Area indexes do not measure differences in the level of prices among cities; they only measure the average change in prices for each area since the base period.

The index measures price changes from a designated reference date (1982-84) that equals 100.0. An increase of 16.5 percent, for example, is shown as 116.5. This change can also be expressed in dollars as follows: the price of a base period "market basket" of goods and services in the CPI has risen from \$10 in 1982-84 to \$11.65.

For further details see the CPI home page on the Internet at [www.bls.gov/cpi](http://www.bls.gov/cpi), and the BLS Handbook of Methods, Chapter 17, The Consumer Price Index, available on the Internet at [www.bls.gov/opub/hom/homch17\\_a.htm](http://www.bls.gov/opub/hom/homch17_a.htm).

<sup>1</sup> This index series was calculated using a Laspeyres estimator. All other item stratum index series were calculated using a geometric means estimator.

<sup>2</sup> Index is on a December 1982=100 base.

<sup>3</sup> Special index based on a substantially smaller sample.

<sup>4</sup> Indexes on a December 1993=100 base.

<sup>5</sup> Indexes on a December 1997=100 base.

- Data not available.

NOTE: Index applies to a month as a whole, not to any specific date.
